EXPERIENCE

Software Engineer, Betsol

📅 Aug 2020 - Present

📍 Bengaluru

Avaya Spaces: Chat and Calling based application [Oct 2020 - Present]

Technologies used: ReactJS + Redux + Nodejs + MongoDB (mostly frontend)

- Independently worked in an agile environment to develop various features using **ReactJS-Redux** concepts of **actions, reducers, selectors, sagas(middleware)** etc and composed directories (parent-child React components) in an organized and efficient manner.
- Pitched in ideas and converted them into real-time working with the help of **Web sockets** as it primarily was a chat-based application.
- Increased the **performance** by moving redux-state being directly accessed in components to **selector** files resulting in better UI and user experience.

Rebit: File Backup Web Application [Sept 2020 - Oct 2020]

Technologies used: ReactJS + Golang + Django + MySQL + JWT

- Built a backup web app from scratch implementing microservice architecture which stores data backed up in different devices and having delete and restore via recycle bin functionality.
- Supports analytic and version control by showing the reports of files with its versions along with Data Visualization.

INTERNSHIP

Software Engineer Trainee, Betsol

📅 Jan 2020 - March 2020

📍 Bengaluru

LeTo: Robotic Process Automation

Technologies used: NodeJS + MySQL + Git commands on Linux, Ubuntu, CentOS, Windows

- Built a plugin for automating different git operations on GitLab in different OS. This plugin was incorporated in workflows and triggered whenever needed.
- Reduces human intervention to significantly save time and bridges automation gaps between users' existing process and tools without having to replace his existing infrastructure thus increasing delivery time.
- Supports integration with Jira/Trello to trigger actions and notify users by emails when changes have taken effect.
- Built a SonarQube Automation Load similar to GitLab plugin.

PROJECTS - GITHUB

File backup web application

Built a fullstack functional project from scratch using the technologies:
Microservices- Backend: Golang + Django, Frontend: ReactJS, DB: MySQL and JWT.

Developed various projects using the concepts of *ReactJS-Redux*.

Freelancing: Mobile application development

📅 July 2019-Sept 2019

Technologies used: Flutter + Android Studio

- Built a mobile application on Flutter for a client with all the wire-frame, design and BRD required.

Developed various projects on mobile app development: *Flutter*

EDUCATION

B.E ,CSE

CGPA- 8.24

📅 2016 - 2020

📍 SJBIT (VTU)

Intermediate (12th)

Percent-86.0 | CBSE

📅 2016

📍 D.A.V Public School

Matriculation (10th)

Percent-91.6 | ICSE

📅 2014

📍 Don Bosco Academy

TECHNICAL SKILLS

- Programming:* JavaScript, Java, Python, Dart
- Frameworks/technologies:* ReactJS, Redux, NodeJS, MongoDB, MySQL, Golang, Django, Web sockets, Flutter.

EXTRACURRICULAR

House Captain of School | District level footballer | Head of Design team in Hostel fest, CSE College fest
